***'The world's most experienced and technologically advanced
rescue organization with 39,000 members in 40 countries'.***

To All Interested Parties:

As the Rescue Chief of 'the world's most experienced rescue and disaster mitigation organization', I am writing this email as an unequivocal endorsement of Quake Alarm.

It is the only earthquake-warning device, which we endorse. It works.

I personally endorse this device because it is simple, effective, practical, inexpensive and most importantly it works. This device has alerted and saved lives in Turkey, India and Mexico. I consider this device to deliver the same level of protection and confidence in shielding people, from death and injury, due to earthquakes; as Smoke Detectors provide for fires.

If you live in a seismically active area, It is cavalier and risky behavior not to have one of these devices in your office and your home.

I use it to protect my family. You should too.

Sincerely,
Douglas F. Copp
Rescue Chief // Disaster Manager
