

Quake Alarm

EARTHQUAKE DETECTOR

Only earthquake alarm endorsed by American Rescue Team International

- ◆ Provides early warning by detecting an earthquake's primary wave before the earthquake's destructive shear wave strikes your area.
- ◆ American Product
- ◆ Fully adjustable sensitivity setting.
- ◆ Automatically resets and shuts off alarm when earthquake stops.
- ◆ Mounts easily to wall. No screws, nails or tools required.
- ◆ Operates off a 9-volt battery. Battery life of more than 2 years.

150 high x 75 wide x 32 deep
Dimensions in MM

- ◆ Loud 100 dB distinctive alarm to wake you up.
- ◆ Monitors aftershocks.
- ◆ Offers peace of mind and keeps you informed.
- ◆ Can detect earthquakes that occur many miles away.
- ◆ Saves valuable seconds by removing the normal guesswork involved in earthquake detection.
- ◆ Maintenance free. Does not require servicing.
- ◆ Prevents panic due to misleading vibrations and rumors.

The **Quake Alarm**; is designed to provide instant warning of seismic activity by detecting the "P" wave (compression wave) of an earthquake, which travels faster than the more destructive "S" wave (shear wave). The **Quake Alarm**; saves valuable seconds by removing the guesswork in earthquake detection. It is capable of detecting large earthquakes that occur hundreds of miles away and can detect moderate to minor earthquakes for many miles around your local area. One very important advantage of the **Quake Alarm**; is that it can wake you up and alert you the moment the quake starts so that you can immediately take cover or tend to other family members. The human mind relies upon the sensations from the inner ear combined with the sense of sight to determine the sensation of motion the body is undergoing at the time that an earthquake starts. Disorientation, known as vertigo, can cause people to become confused and instinctively freeze for many seconds during the onset of an earthquake. Sound also plays a part in earthquake detection and by itself can be misleading. The sound of a slamming garage door or the low rumble of a large truck has startled many people into falsely thinking that they are about to experience an earthquake. The **Quake Alarm**; can eliminate confusion, save valuable seconds and provide peace of mind.

When time counts, be informed and prepared with the Quake Alarm

For: Homes, offices, school classrooms, Hotel rooms, Hospital rooms, Restaurants
